

AURORA ENERGY REPORTS ADDITIONAL DRILLING RESULTS FROM THE CENTRAL MINERAL BELT URANIUM DISTRICT, LABRADOR, CANADA

Aurora Energy Inc., a private company in which Altius owns a 43-per-cent equity interest, has received additional drill core assay results from the Central Mineral Belt uranium project in Labrador, Canada.

Earlier today, project operator Fronteer Development Group has reported assay results from a series of drill holes that tested two additional target areas in the district, **Jacques Lake** and **Otter Lake**, which are located approximately 25 km and 30 km, respectively, east-northeast of the historic Michelin uranium deposit.

At Jacques Lake, seven shallow drill holes encountered near surface uranium mineralization in four holes. The best result was from drill hole JL-05-05. Fronteer reports **0.10% U₃O₈ over 9.2 metres including 0.20% over 2.1 metres** from this hole.

At Otter Lake, four out of ten holes drilled intersected bedrock uranium mineralization in three distinct areas within a large radiometric anomaly identified by the 2004 airborne survey. The best results from this area of drilling came from the Otter South target, from which Fronteer has reported uranium values of **1.0% U₃O₈ (22 pounds uranium per tonne) over 0.5 metres** in drill hole OL-05-04.

Please refer to Fronteer's News Release for further technical details and highlights.

In addition to its 43% equity interest in Aurora Energy Inc., Altius holds a 2-per-cent gross sales royalty relating to uranium and 2-per-cent net smelter return royalty on production of base metals and precious metals covering the project.

Should Aurora Energy Inc. not list as a publicly traded company by June 17, 2006, Altius can increase its equity interest to 50 percent for \$2.5 million, which is half of Aurora's 2005 exploration budget and by relinquishing its royalty interests covering the project.

Altius has a royalty interest in the Voisey's Bay nickel district in Labrador, Canada, where production has commenced and first metal concentrates have been shipped. It holds 43% of Aurora Energy Inc. plus royalty interests in its Central Mineral Belt uranium project and 30% of Rambler Metals and Mining plc, which owns the Rambler copper-gold project. Altius also has a diverse portfolio of exploration properties that are largely financed by select joint venture partners.

David Barbour, P.Geo., is the qualified person for Altius on the Central Mineral Belt project. Uranium resources referred to for the Michelin deposit are historical in nature, predate, and are non-compliant with National Instrument 43-101. Altius has not undertaken an independent investigation of the resource estimate or independently analyzed the results of the previous exploration work in order to verify the classification of the resources, and therefore the historical estimates should not be relied upon. Altius believes these historical estimates provide a conceptual indication of the potential of the property and are relevant to continuing exploration. The drill core was prepared and analyzed in accordance with industry standards by Activation Laboratories Ltd., Ancaster, Ontario.
